                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        σ
after the GRR repeat may promote the generation of p50 mak an acceptable substrate for the proteasome. The processed active and the unprocessed form acts as an inhibitor (I kalike), being able to form cytosolic complexes with NF-kapp trapping it in the cytoplasm. Complete folding of the region downstream of the GRR repeat precludes processing. PTM: Polyubiquitination seems to allow P105 processing. SIMILARITY: BELONGS TO THE REL/DORSAL FAMILY.
                                                                                                                                                                                                                                                                                                                                                                                                                      SUBCELLULAR LOCATION: Nuclear, but also found in an inactive form complexed to an inhibitor ALTERNATIVE PRODUCTS: 3 isoforms; pl05 (shown
